

Demo Corpus

Version: 1.2.0 | Updated: 2026-06-15

A curated collection of architecture and strategy documents spanning 20+ years of work in financial services technology — from 2003 to 2026.

This corpus ships with AIStudio as a ready-to-query demonstration dataset. It lets you experience the system immediately after install, without needing to supply your own documents first.

It also serves as a substantive test of retrieval quality — these are real, dense documents on complex topics, not toy data.

What's Here

Nine original documents spanning 2003–2026 — architecture methodology, financial-services technology strategy, and the evolution toward AI-enabled systems.

Architecture Methodology

Foundational thinking on enterprise architecture and how Quality Function Deployment (QFD) applies to technology architecture.

- Erder | Pureur - 2003 - Architecture and QFD.pdf (454 KB)
- Barbero - 2006 - Architecture Concepts and How To Use Them To Design an Organization.pdf (1.1 MB)

Financial Services Journal Series

Volumes of an edited journal on technology strategy and architecture in financial services — strategy/architecture concepts, digitization, IT infrastructure, and risk/compliance/security. Edited by Manuel Barbero (2005–2006).

- Barbero et al. - 2006 - FS Journal - Strategy and Architecture Concepts and Techniques.pdf (2.7 MB)
- Barbero et al. - 2005 - FS Journal - Digitization.pdf (1.8 MB)
- Barbero et al. - 2005 - FS Journal - IT Infrastructure.pdf (1.1 MB)
- Barbero et al. - 2005 - FS Journal - Risk Compliance and Security.pdf (872 KB)

Modern Technology, Data & AI

The evolution from traditional IT architecture toward cloud, data, and AI-enabled systems.

- Barbero - 2020 - Technology Modernization and Cloud Migration.pdf (1.4 MB)
- Barbero | Hunt - 2021 - Data Strategy.pdf (2.3 MB)
- Barbero - 2026 - Agentic AI in Financial Services.pdf (97 KB)

Suggested Demo Questions

These are the questions AIStudio's demo benchmark runs against the corpus — all 14 are validated to retrieve and answer cleanly from the nine documents. Run `ais_bench` to execute them; the machine-readable set lives in `benchmarks/demo/demo_questions.yaml`.

Architecture Methodology - What is QFD and how does it apply to technology architecture? - How do you design an IT organization around architectural principles? - How do architecture concepts help design organizations?

IT Strategy & Leadership - How should a CTO prioritize a three-year technology strategy? - What does a good technology target state look like? - How do you organize a large-scale IT transformation program? - What is the relationship between business strategy and technology strategy?

Modern Technology - What are the key considerations for cloud migration and technology modernization? - What are the key principles for modernizing legacy applications?

Financial Services - How do Sarbanes-Oxley and Basel II requirements shape IT governance and security architecture in financial services firms? - How has digitization changed financial

services technology? - What is the role of architecture in managing technology risk in financial services?

Agentic AI - What are the key opportunities and limitations of agentic AI in financial services? - How should organizations embed AI into their knowledge productivity ecosystem?

Corpus Statistics

Metric	Value
Total documents	9
Date range	2003 — 2026
Formats	PDF
Domain	Financial services technology architecture

Ingesting the Demo Corpus

You don't need to. The demo corpus ships pre-ingested and indexes itself on the first `ais_start` — select **demo** from the corpus dropdown and start querying. (To rebuild it from scratch, delete it in the UI and re-add the files via **Upload**.)
